

Aquafilm® for a safe and healthy medical environment

In medical environments, health and safety is paramount.

Whether handling linen, clothing or instruments, it is vital to eliminate the risk of cross infection to staff and patients.

The Aquafilm range of products help meet Duty of Care Guidelines HSG (95) 18 by ensuring the safe isolation, transportation and disinfection of foul and infected linen.

THE DISAPPEARING LAUNDRY BAG

Aquafilm Soluble Laundry Bags are totally soluble and biodegradable. Contaminated linen is placed in the bag; the bag is then sealed with its cold water soluble pink tie ready for transfer to the laundry, where it is placed unopened into the washer.

As the wash progresses, the laundry bag disperses into solution.

The Aquafilm Plus range features the same properties as the standard Aquafilm bag with the added feature of a higher resistance to moisture and dampness, ideal for those hospital areas which have much wetter linen to deal with.

Aquafilm Soluble Laundry Bags are hot water soluble and suitable for washes at 65°C and above.

They are not suitable for use in domestic washing machines.

Bags are supplied on a roll of 25, in a polythene re-sealable dispenser.

Each box contains 4 packs of 25 printed in 5 languages: English, Japanese, Spanish, Italian and French.

dissolvo

The Aquafilm Dissolvo Sack is a soluble membrane laundry bag, with added protection of an overlapped slit protecting the soluble membrane from contact with damp linen inside the bag.

The filled Dissolvo Sack is placed sealed into the washing machine.

During the initial wash the soluble membrane dissolves along with the tie tape, releasing the contents of the bag for processing.

At the end of the wash cycle the linen is removed for drying and the Dissolvo Sack – now a clean, disinfected sheet of film – is removed and discarded.

The Dissolvo Sack is ideal for nursing and residential homes, and suitable for hot and cold washes.

Self Closing Sack Stand also available.

dissolvo

The Patients Clothing Bag is a soluble membrane laundry bag ideal for containing clothing destined for home washing or single garment laundering in hospitals.

Clothing is placed into the bag and the bag sealed with the attached pink tie tape, this eliminating any unnecessary handling of soiled or infected garments and reducing any unpleasant odours.

PATIENTS CLOTHING

BOO NOT TUNNELE DITY

Suitable for both hot and cold washes, the Patient Clothing Bag is placed unopened into the washing machine. During the initial wash cycle the soluble membrane and the tie tape dissolve releasing the contents of the bag for washing. Once the wash cycle is complete the Patients Clothing Bag is removed and discarded.

The Patients Clothing Bag is white in colour with an orange strip, designed to conform to HSG (95) 18, with easy to follow instructions for use printed on each bag. Bags are available in compact dispenser boxes of 100 bags.
